Dear sir/madam,

RE: LOVE MATTERS MOST

This is to inform you that the above mentioned organization has been an integral part in strengthening our service delivery to our HIV/TB clients, since Oct 2018 to date. They have immensely contributed in increasing health care accessibility to those who would otherwise not be able to access the health care services.

This organisation has really improved the quality of health to many beneficiaries by complementing the chronically weak healthcare system in Kisumu County,

by:

1. Providing the referral system from the communities (remote areas) to the health facilities (breaking the geographical barrier to Healthcare access).
2. Settling medical bills to the less fortunate/vulnerable who cannot meet the medical expenses. (breaking financial barrier).
3. Offering psychological counselling at times with cooperation of healthcare personnel to the clients who had already given hope in life.
4. Sensitising the community on the importance of seeking medical intervention instead of the traditional approach. This has changed the health seeking behaviour of those who would otherwise die at home.
5. Facilitate the delivery of food by prescription from the facility to the malnourished group who would otherwise languish in malnutrition and subsequently perish.

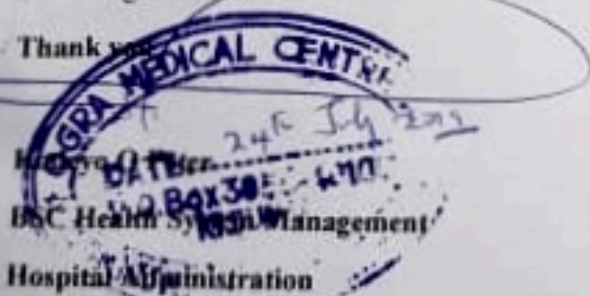

In summary; the love matters most has tremendously improved health outcomes of our clients by giving them hope and saving lots of lives.

On behalf of Ogra medical centre, and as a graduate healthcare system specialist, may I take this opportunity to sincerely thank love matters most for their commitment and contribution in ensuring that healthcare services is accessible to all the vulnerable in the society who need it and when irrespective of their financial/ geographical position.

As a hospital facility, we are looking forward for more partnership and working together in serving our communities.

I therefore wish to recommend this organisation for any support that it may require to continue delivering its mandate.

Thank you
